Insights

- September has shown an increase in all visitor types, but most notably of Career and Patients (34.43% and 6.84% increases, respectively), with Patients being significantly more engaged in September than they were in August. This is primarily evident via a 46.01% increase in the average pages per session (meaning a full additional page was viewed during the average session). The majority of additional page views came from the Renal-Care category.
- There was a slight uptick in September of Returning Visitors, whom accounted for 18.07% of the visitors (as compared to 17.42% in August). This likely contributed to a portion of the increased engagement, but not all, just based on volume. This indicates that the 'quality' of new site visitors is keeping pace with the 'quantity' increases - a difficult task which is being well accomplished.
- Organic Search continues to be the dominate channel, providing 51.18% of the users for the month. This is also the most efficient channel with it's goal completion contribution continuing to outpace users (goal contributions being 60.18%). Direct is fairly close in efficiency, providing 37.11% of the users in September and 32.17% of the goal completions.
- Combined, the goals are showing a net increase month-over-month - a 24.60% improvement. This was led primarily by Job Portal clicks which in creased by 33.20% alone - the equivalent of 5,000+ additional conversions this month. Percentage-wise, the Product Catalog clicks had a slight decrease - -2.27% - however, this is the equivalent of 93 clicks.
- Overall, the site continues to appear healthy and is continuing its growth trend upward both in traffic and conversions.
